

Introduction of Hai Van Pass Tunnel Construction Project in Vietnam

Ichizuru Ishimoto
Nippon Koei Co., Ltd., Japan
Session APR04

Hai Van Pass Tunnel Construction Project

Design : Jan 1998 ~ July 1999

Bidding : June 1999 ~ December 2004

Construction & Procurement

: October 2000 ~ On going

Tunnel Open : May 2005

Introduction of Hai Van Pass Tunnel Construction Project in Vietnam

My Responsibilities:

| Period | Position |
|------------------------------|---|
| August 2000 ~ September 2001 | Construction Engineer Resident Engineer (3) Quantity Surveyor |
| October 2001 ~ March 2002 | Construction Engineer Quantity Surveyor |
| March 2002 ~ March 2003 | Project Manager Construction Engineer Quantity Surveyor |
| April 2003 ~ To Date | Project Manager Construction Engineer Resident Engineer (3) Quantity Surveyor O&M Leader |

Introduction of Hai Van Pass Tunnel Construction Project in Vietnam

- **Introduction of Project, Distinct Points of the Project (1)**
 - 1) 6.3km long tunnel; longest highway tunnel in Southeast Asia,
 - 2) First Application of New Austrian Tunneling Method (NATM) in Vietnam,
 - 3) Application of Longitudinal Ventilation System, including Electrostatic Precipitator (EP), Ventilation Adit and Jet Fans,
 - 4) Application of integrated overall operation control system said SCADA (Supervisory Control And Data Acquisition), and
 - 5) Operation and Maintenance (O&M) Company Required.

Introduction of Hai Van Pass Tunnel Construction Project in Vietnam

- **Introduction of Project**, Distinct Points of the Project (2),
A 6.3 km Long Highway Tunnel
 - 1) Longest highway tunnel in Southeast Asia,
 - 2) Approximately 30th longest highway tunnel in the world
 - 3) Combined tunnel ventilation system required to keep air inside the tunnel clean (Dust, CO, NO_x)
 - 4) Emergency Response Team Required

Introduction of Hai Van Pass Tunnel Construction Project in Vietnam

- **Introduction of Project, Distinct Points of the Project (3), NATM Tunneling Method**

New Austrian Tunneling Method (NATM) was developed by Austrian engineers such as RABCEWICZ from 1957 to 1965.

The principles of the method is that observations should be undertaken to confirm that the support is adequately stabilizing the surrounding ground, so that the rate of convergence towards the tunnel is perceived to be approaching an asymptotic value.

The essence of design of a system of incremental support is to understand the stress-strain properties of the ground and of the tunnel support since, essentially, controlled strain of the ground has to occur in order to develop a changed stress field in the ground around the tunnel compatible with the degree of support.

The NATM has now gained general acceptance in the engineering world through the years of construction practices in various field such as highway, railway, and waterway.

Economic Method

Standard Tunneling Method
in the World

Introduction of Hai Van Pass Tunnel Construction Project in Vietnam

- **Introduction of Project, Distinct Points of the Project (4), Ventilation System (1)**

- Ventilation Facilities
- 1) 3@ Electrostatic Precipitator (EP)
 - 2) 23@ Jet Fan
 - 3) 1@ Supply & Exhaust Fans

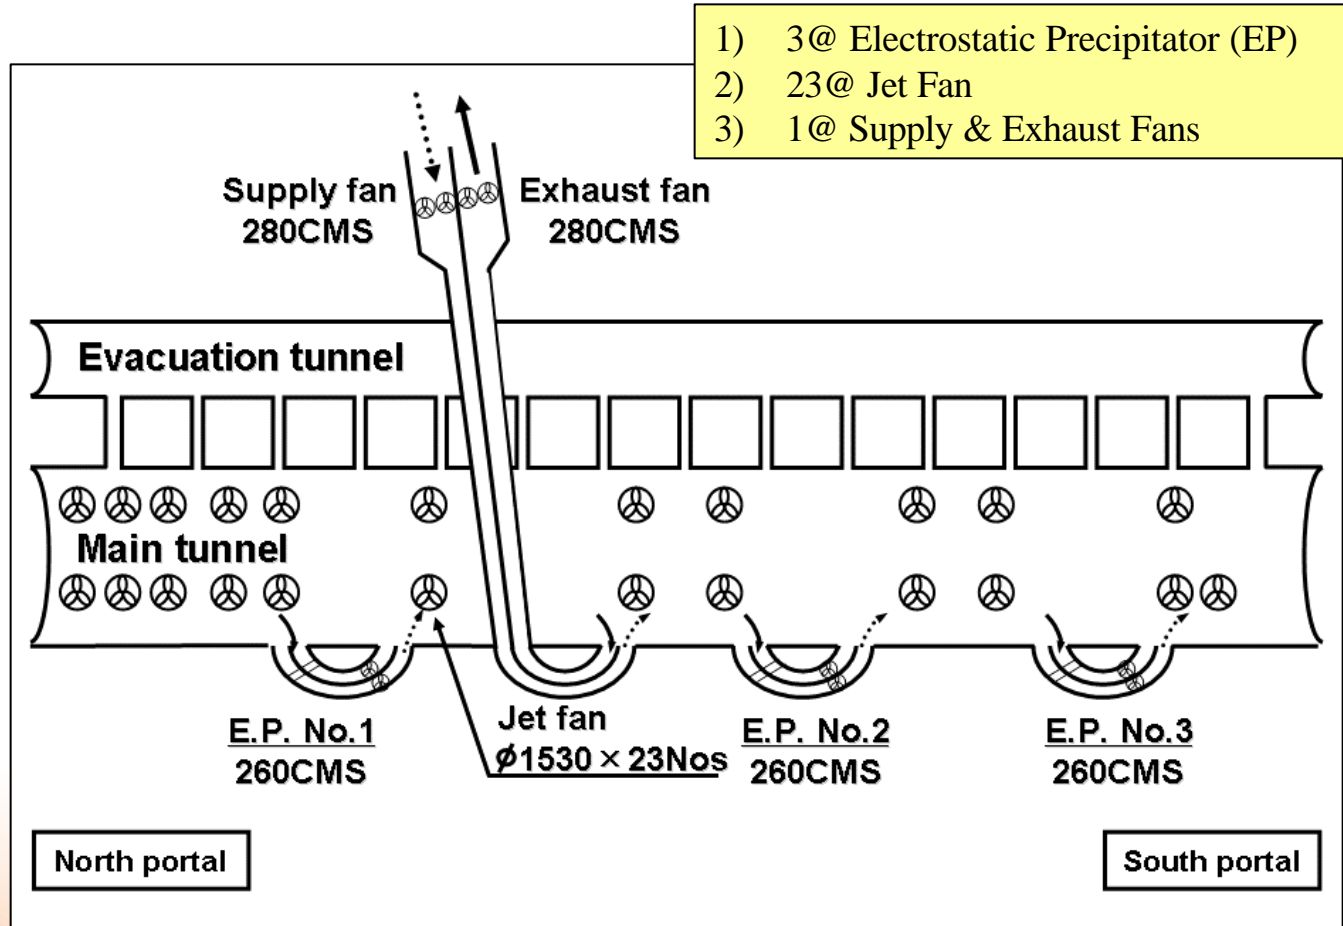

- Ventilation Measurements
- 1) VI Meters
 - 2) CO Meters
 - 3) Anemometers

Introduction of Hai Van Pass Tunnel Construction Project in Vietnam

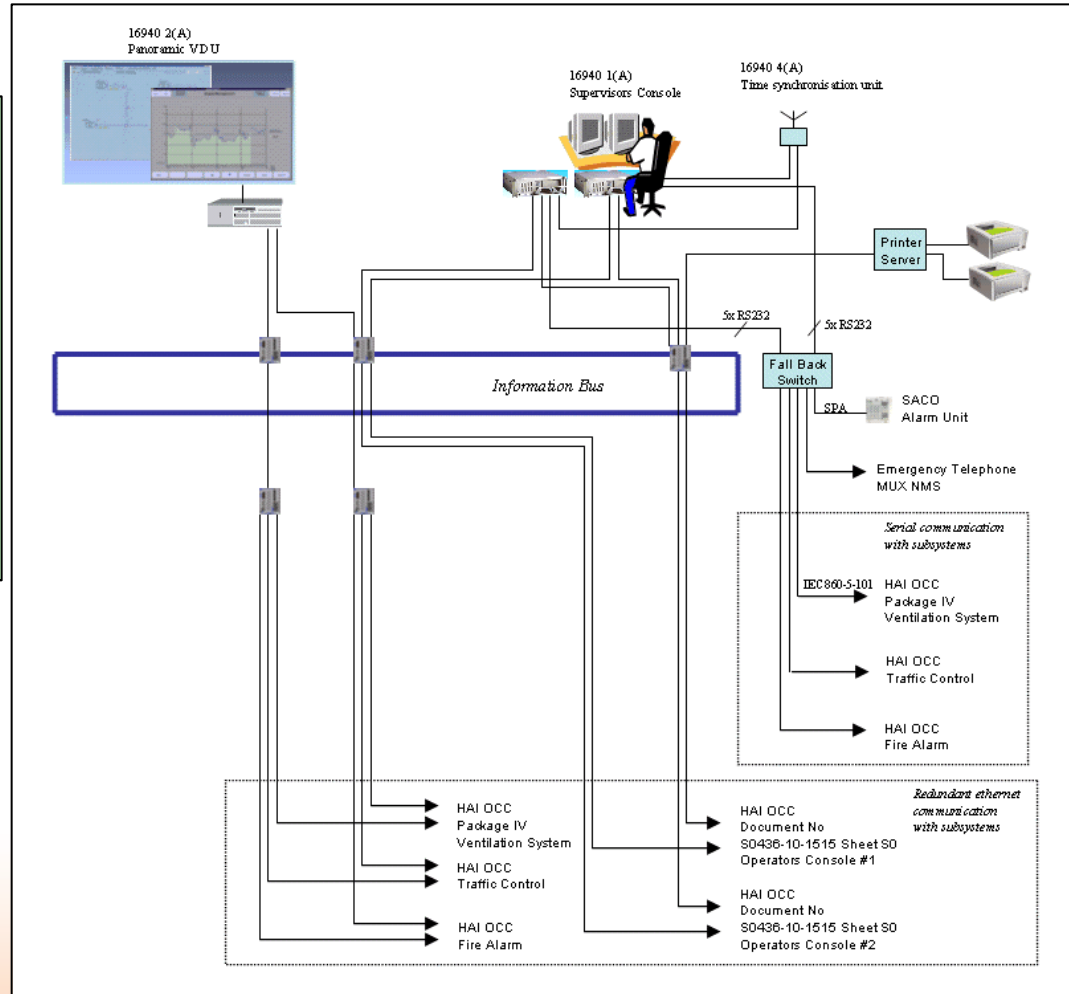

- **Introduction of Project**, Distinct Points of the Project (5),
Ventilation System (2)

Introduction of Hai Van Pass Tunnel Construction Project in Vietnam

- **Introduction of Project, Distinct Points of the Project (6), SCADA System**

- 1) Power Distribution System
- 2) Tunnel Lighting System
- 3) Traffic Management System
- 4) Telecommunication System
- 5) Fire Detection System
- 6) Fire Protection System
- 7) CCTV System
- 8) Radio Rebroadcast System
- 9) Ventilation System

Introduction of Hai Van Pass Tunnel Construction Project in Vietnam

- **Introduction of Project**, Distinct Points of the Project (7),
Operation and Maintenance Company Required (1)

For the operation and maintenance of the first long highway tunnel in Vietnam, HAMADECO, O&M Company, was established by referring the Japanese practice. Followings have been advised:

- O&M Organization
- O&M Manuals
- O&M Training
- Emergency Response Training
- Tunnel Opening Plan

Introduction of Hai Van Pass Tunnel Construction Project in Vietnam

Introduction of Hai Van Pass Tunnel Construction Project in Vietnam

- **PM Practice (1): Human Resource Management,**
Three Objectives for Project Management

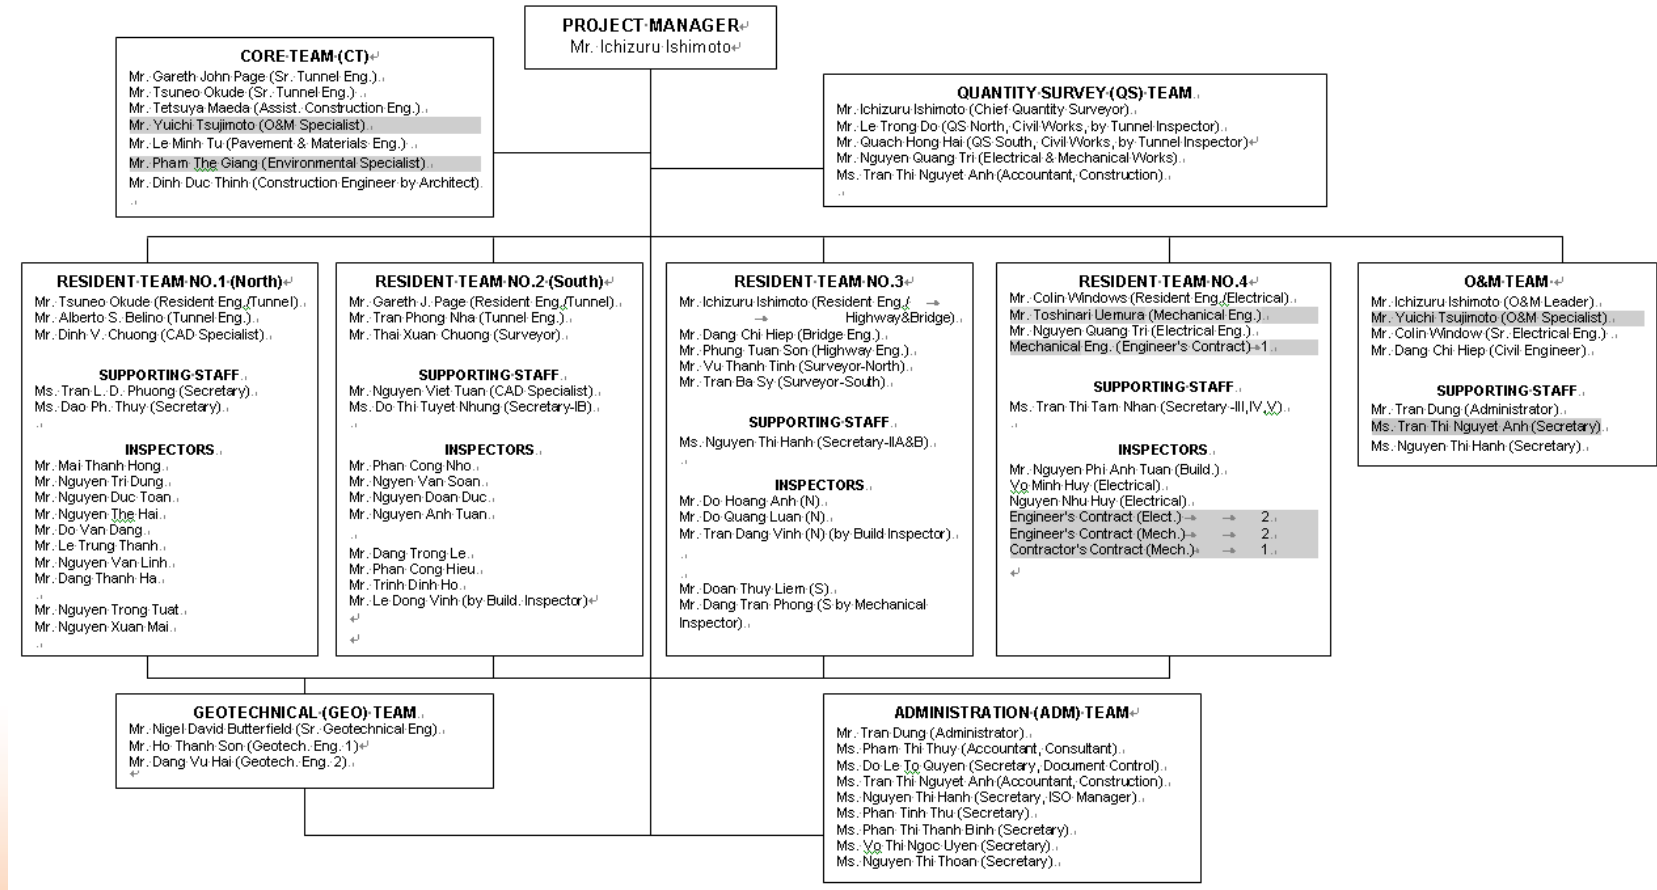

The Project Manager (PMR) of the Consultant team is responsible for both the management of the Consultant Team and the overall project.

| No. | Management Object |
|-----|-----------------------|
| A | Consultant Team |
| B | Project |
| B-1 | Overall Project |
| B-2 | Each Contract Package |

| SUBJECT: | Submission of Progress Tracking (December 2004) |
| Dear Mr. Canh, | |
| We are pleased to submit the progress tracking result based on BLP2a as of the end of December 2004. We applied Baseline Program No2 (BLP2) which has the following characters: | |
| <ol style="list-style-type: none">1) Detailed work schedule on the basis of working zone approximately 400 m intervals2) All work linkages between related packages taken into account3) Most probable work schedule as of 31 March 2004. | |
| 1 | General |
| During December, all electrical rooms were hand-over to PK3 from PK4. PK3 has started his installation works at all electrical rooms. Open works of NPP and SPP could not be completed because of rain. | |

Good Morning, Welcome to Our Site!

Welcome to the official website of Hai Van Tunnel Construction Project, the longest Highway Tunnel in Southeast Asia and one of six National Projects of Vietnam!

Last Update: January 14, 2005 (GMT +7:00)

HAIVAN PASS TUNNEL Facts-At-A-Glance

Consultants
 Joint-venture of Nippon Koei Co., Ltd. (Japan) and Louis Berger International Inc.(USA), in association with Transport Engineering Design Incorporation - TEDI, (Vietnam) >>>

What
 The Project will complete a new two-lane highway segment of **12,182m in total length**. It includes a **6,255m long tunnel** section, bridge sections (eight bridges) of 1,635m in total length, and highway sections of 4,273m in total length. In parallel with the main tunnel, an evacuation tunnel will be constructed to its east. >>>
